

# Nail Polish How-To

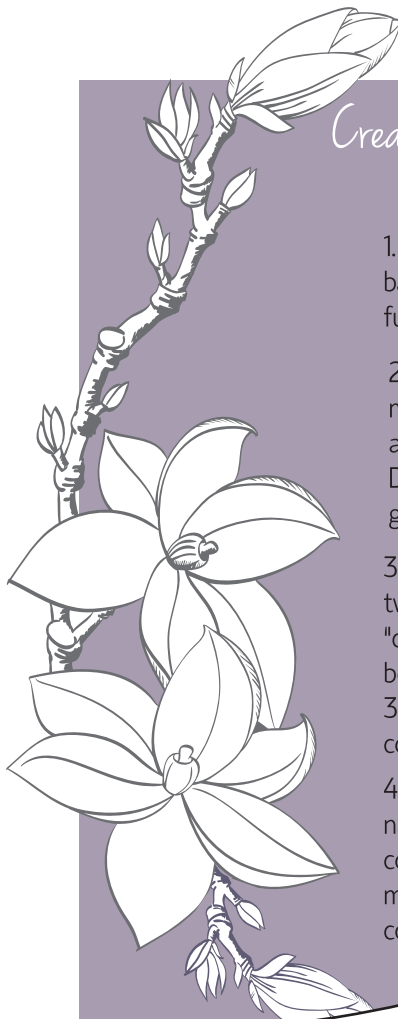

Creating your own unique shade of nail polish is easy!

1. Slowly and carefully, pour the nail polish base into the nail polish bottle until nearly full. Drop a mixing ball into the bottle.

2. Using a mini scoop, add 4 - 5 scoops of mica into the bottle. The more mica added, the less sheer your polish will be. Don't be afraid to mix colors and add glitter!

3. Insert the brush into the bottle and twist the black cap over it until you hear a "click". Once the cap is securely on the bottle, start shaking! Shake the bottle for 3 - 5 minutes to fully disperse the colorant into the nail polish base.

4. Use the template below to test your nail polish color as you go. If you feel the color is too sheer, add a scoop or two more mica. Once you're happy with the color, it's time to name it and add a label!
